Job Title: Software Tester

Job Summary

We are seeking a meticulous Software Tester to join our team and ensure the quality and reliability of web applications built with React.js and Next.js. The ideal candidate will execute and develop test strategies, identify defects, and collaborate closely with developers to deliver high-quality products.

Responsibilities

- Design, develop, and execute manual and automated test cases for React.js and Next.js applications.
- Perform functional, regression, performance, and cross-browser testing.
- Identify, document, and track software defects and inconsistencies.
- Collaborate with developers and product teams to understand features and provide feedback on testability.
- Validate UI/UX consistency and responsiveness across devices.
- Maintain test documentation and report testing outcomes to stakeholders.

Qualifications

- Bachelor's degree in Computer Science or related field.
- Experience testing web applications built with React.js and Next.js frameworks.
- Proficiency with testing tools and frameworks relevant to JavaScript-based front-end development.
- Strong analytical skills and attention to detail.
- Experience working in Agile development environments.

Skills

- Manual and automated testing methodologies.
- Familiarity with JavaScript, React.js, Next.js ecosystems.
- Debugging and troubleshooting skills on front-end platforms.
- Solid understanding of web technologies: HTML, CSS, and REST APIs.
